Professional Summary

Computer Science student and incoming M.Eng. candidate at Virginia Tech with experience in full-stack development, API integration, and Agile methodologies. Proven track record of delivering high-impact solutions, including a 1,000% increase in system detections during software engineering internship. Focused on building scalable, user-centric applications using containerized environments and modern architectures.

Education

Virginia Tech University

Alexandria, VA

Masters of Engineering in Computer Science & Applications (Accelerated Program)

May 2027

James Madison University

Harrisonburg, VA

Bachelor of Science in Computer Science, Minor in Data Analytics, GPA: 3.55/4.0

May 2026

- Dean's List – James Madison University, Spring 2025, Fall 2024, Spring 2023, Fall 2022

Experience

ManTech

Herndon, VA

Technical Support Intern

July 2025 - Present

- Provide IT support using ServiceNow, Okta Admin, and Asana, assisting 50+ users with account provisioning, access management, and troubleshooting hardware/software issues, achieving a 100% satisfaction rating.
- Explained technical troubleshooting steps in clear, non-technical language to ensure understanding by diverse user groups.

Noblis

Reston, VA

Advanced Technology Engineer Intern (Software Engineer Intern)

Summer 2024

- Integrated REST APIs into AI/Machine Learning applications leveraging Redis, Kafka, and related technologies to improve system data flow and reliability, contributing to a 1000% increase in detections.
- Applied Agile methodologies, participating in daily stand-ups, sprint planning, and retrospective meetings to support backend development.
- Developed unit tests, participated in code reviews, and debugged application issues to maintain software quality.

Determan Tech Help

Falls Church, VA

Owner / Support Specialist

Summer 2023 to Present

- Founded and scaled a tech support business assisting 100+ clients with custom PC builds, device setup, and hardware/software troubleshooting, maintaining a 5-star rating from reviews.
- Developed a scheduling and review website hosted on a dedicated server using CloudFlare and Node.js.
- Designed client-specific technical solutions, optimizing performance and usability for diverse needs.

Projects

NoXcuses IOS App

July 2025 to Present

- Developing "NoXcuses," a feature-rich fitness tracking iOS application using SwiftUI and MVVM architecture, enabling users to log workouts, track progress, and create custom routines.
- Integrating the full Firebase ecosystem (Auth, Firestore, Storage) to implement secure authentication, real-time data synchronization across devices, and robust offline support.
- Established a robust development workflow including unit/UI testing suites and comprehensive data privacy policies to ensure app stability and user data security.

McIntosh PowerWash Website

June 2025

- Designed and developed the website's front-end architecture and user interface, applying software design principles to ensure usability and responsiveness.
- Integrated Google Maps and Calendar APIs, doubling incoming service requests.

Superman Video Game

June 2022 to Present

- Designed and developed a 3D open-world Superman-themed game using Unreal Engine.
- Learned and applied Blueprint scripting, Blender modeling, and physics simulations to create immersive gameplay.
